SAMPLE PROGRAM SCENARIO

You are working for a restaurant – the East Berkshire Cooking Company (EBCC). They currently take all orders on paper and must calculate order totals manually. This system is prone to error. They want you to demonstrate that you can build for them a simple console-based menu system that will allow users to select an order and it will calculate the totals.

- The program will allow the waiter to select tables of either 3 or 5 customers.
- The user enters the name of the customer.
- It will then display to the choice of three main courses.
- The user can pick any one of these four
    - 1 Pie - £8
    - 2 Fish - £9
    - 3 Pasta - £10
    - 4 Steak - £14
    - 5 No Main
- If they pick that item, the name and price is added to their final bill.
- The program will repeat for either 3 or 5 people.
- At the end the menu choices are displayed like this:

Name	Main	Total
Mr X	Cottage Pie	£13
Ms Y	Steak and Chips	£17
Ms Z	Steak and Chips	£17

The program will then work out the total for the meal.

The program will
